## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 8\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotException AtTheRateException DomainException

A typical email address should have a "." character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

### ***Input Format***

The first line of input contains the email to be validated.

### ***Output Format***

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

### **Sample Test Case**

Input: sample@gmail.com

Output: Valid email address

### **Answer**

```
// You are using Java
import java.util.Scanner;
class DomainException extends Exception {
    String expDescription;
    DomainException(String expDescription) {
        super(expDescription);
    }
}
class DotException extends Exception {
    String expDescription;
    DotException(String expDescription) {
        super(expDescription);
    }
}
class AtTheRateException extends Exception {
    String expDescription;
    AtTheRateException(String expDescription) {
        super(expDescription);
    }
}
class EmailValidationMain {
    public static void main(String[] args) {
        Scanner myObj = new Scanner(System.in);
        String email = myObj.next();
        boolean checkEndDot = false;
        checkEndDot = email.endsWith(".");
        int indexOfAt = email.indexOf('@');
        int lastIndexOfAt = email.lastIndexOf('.');
        int countOfAt = 0;
        for (int i = 0; i < email.length(); i++)
        {
            if(email.charAt(i)=='@')
```

```

        countOfAt++;
    }
    String buffering = email.substring(email.indexOf('@')+1, email.length());
    int len = buffering.length();
    int countOfDotAfterAt = 0;
    for (int i=0; i < len; i++) {
        if(buffering.charAt(i)=='.')
            countOfDotAfterAt++;
    }
    String userName = email.substring(0, email.indexOf('@'));
    String domainName = email.substring(email.indexOf('.')+1, email.length());
    int domainCheck=0;
    if((domainName.equals("in")) || (domainName.equals("com")) ||
(domainName.equals("net")) || (domainName.equals("biz")))
        domainCheck=1;
    try {
        if((checkEndDot) || (countOfDotAfterAt!=1)) {
            throw new DotException("Invalid Dot usage");
        }
        if(countOfAt!=1) {
            throw new AtTheRateException("Invalid @ usage");
        }
        if(domainCheck!=1) {
            throw new DomainException("Invalid Domain");
        }
    }catch(DotException e) {
        System.out.println(e);
    }catch(AtTheRateException e) {
        System.out.println(e);
    }catch(DomainException e) {
        System.out.println(e);
    }
    if ((countOfAt==1) && (userName.endsWith(".")==false) &&
(domainCheck==1) && (countOfDotAfterAt ==1) &&((indexOfAt+3) <=
(lastIndexOfAt) && !checkEndDot)) {
        System.out.println("Valid email address");
    }
    else {
        System.out.println("Invalid email address");
    }
}
myObj.close();
}
}

```

**Status :** Correct
