## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

**Sample Test Case**

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

**Answer**

```
// You are using Java
import java.util.Scanner;
class Main{
    public static void main(String args[]){
        Scanner sc = new Scanner(System.in);
        int a = sc.nextInt();
        int temp = a;
        int sod = 0;
        int nod = 0;
        do{
            int dig = temp%10;
            sod+=dig;
            temp/=10;
            nod++;
        }
        while(temp>0);
        if(sod==nod)
            System.out.print("The number of digits in "+a+" matches the sum of its
digits.");
        else
            System.out.print("The number of digits in "+a+" does not match the sum
of its digits.");
        }
    }
```

**Status :** Correct

**Marks :** 10/10
